Denmark, Grønland, and Faroe Islands

Area

Denmark 43,094 km²

Greenland 2,166,086 km²

Faroe Islands 1,399 km²

Population 5,543,453

Greenland 57,695

Faroe Islands 49,483

Denmark energy

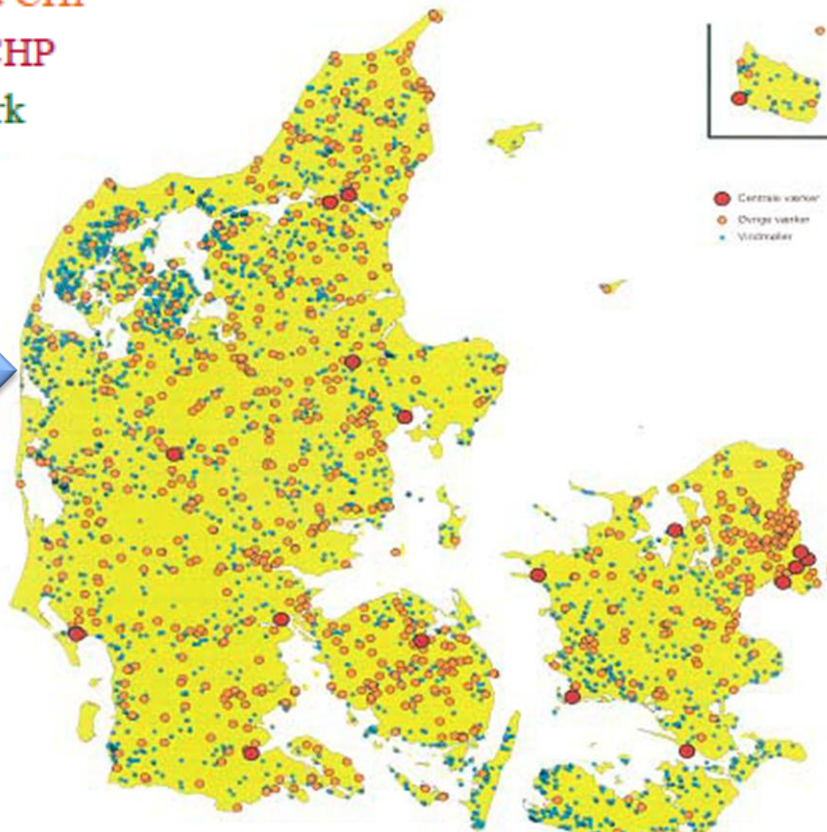

Centralized production in the mid 80's

Decentralized production of today

Legend:

- Decentralized CHP
- Centralized CHP
- Wind mill park

- Central CHP
- Decentral CHP
- Windmills

District heating and CHP have reduced Denmark's CO2-emission by 1/5.

Aalborg University

Aalborg University was created through a merger of a number of well-established institutions, combined with the establishment of a number of new faculties in 1974.

Aalborg University was characterised by its well-reputed education form of **problem based project (PBL) work** – also known as the **Aalborg model**. The number of students is around 15,000.

General aspects of a Microgrid: “Definition and Operation”

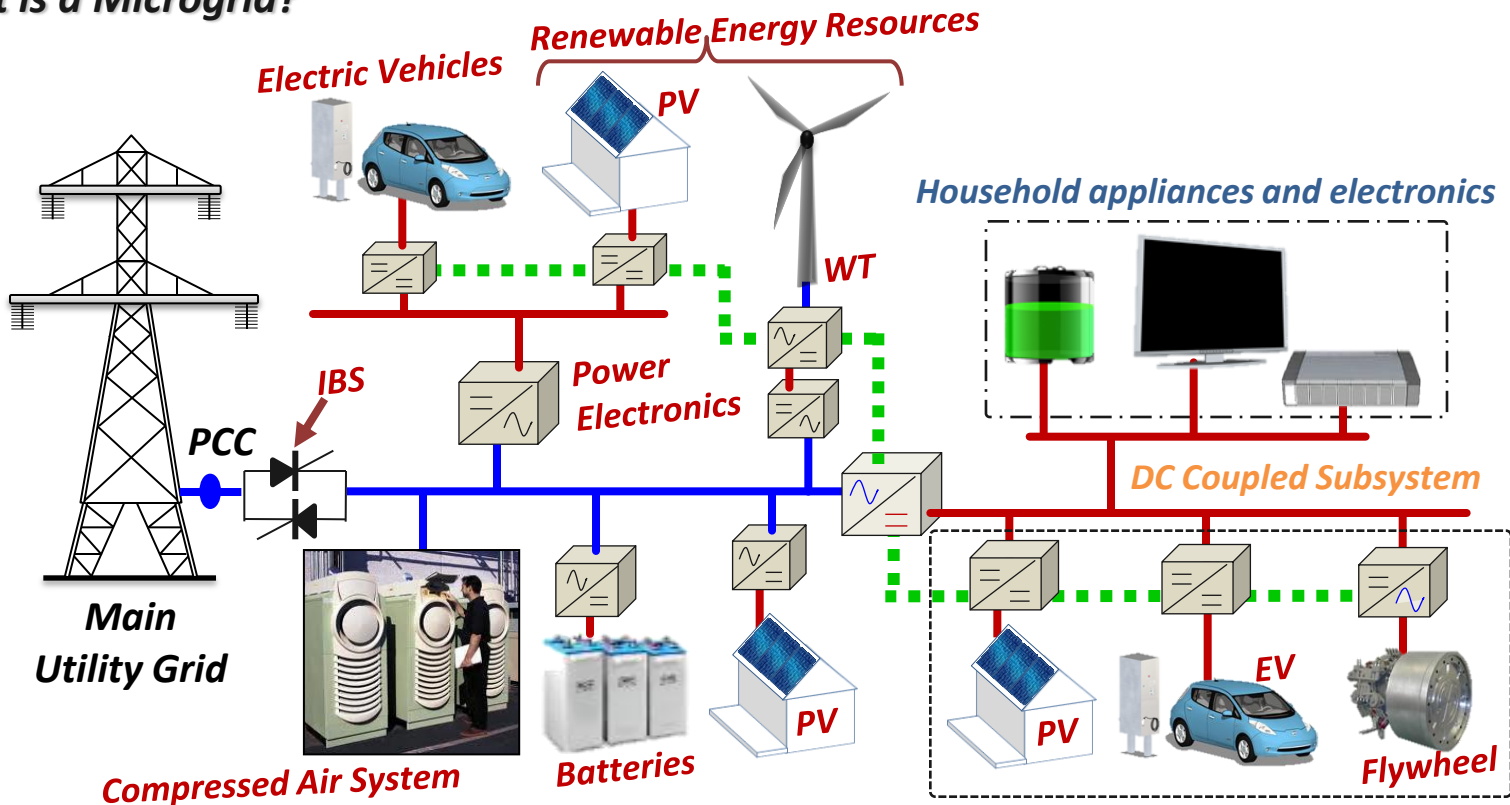

CIGRÉ C6.22 Working Group Definition:

Microgrids are electricity distribution systems containing loads and distributed energy resources, (such as distributed generators, storage devices, or controllable loads) that can be operated in a controlled, coordinated way either while connected to the main power network or while islanded.

General aspects of a Microgrid: "Definition and Operation"

Hybrid AC/DC Microgrids

What is a Microgrid?

What is a Microgrid?

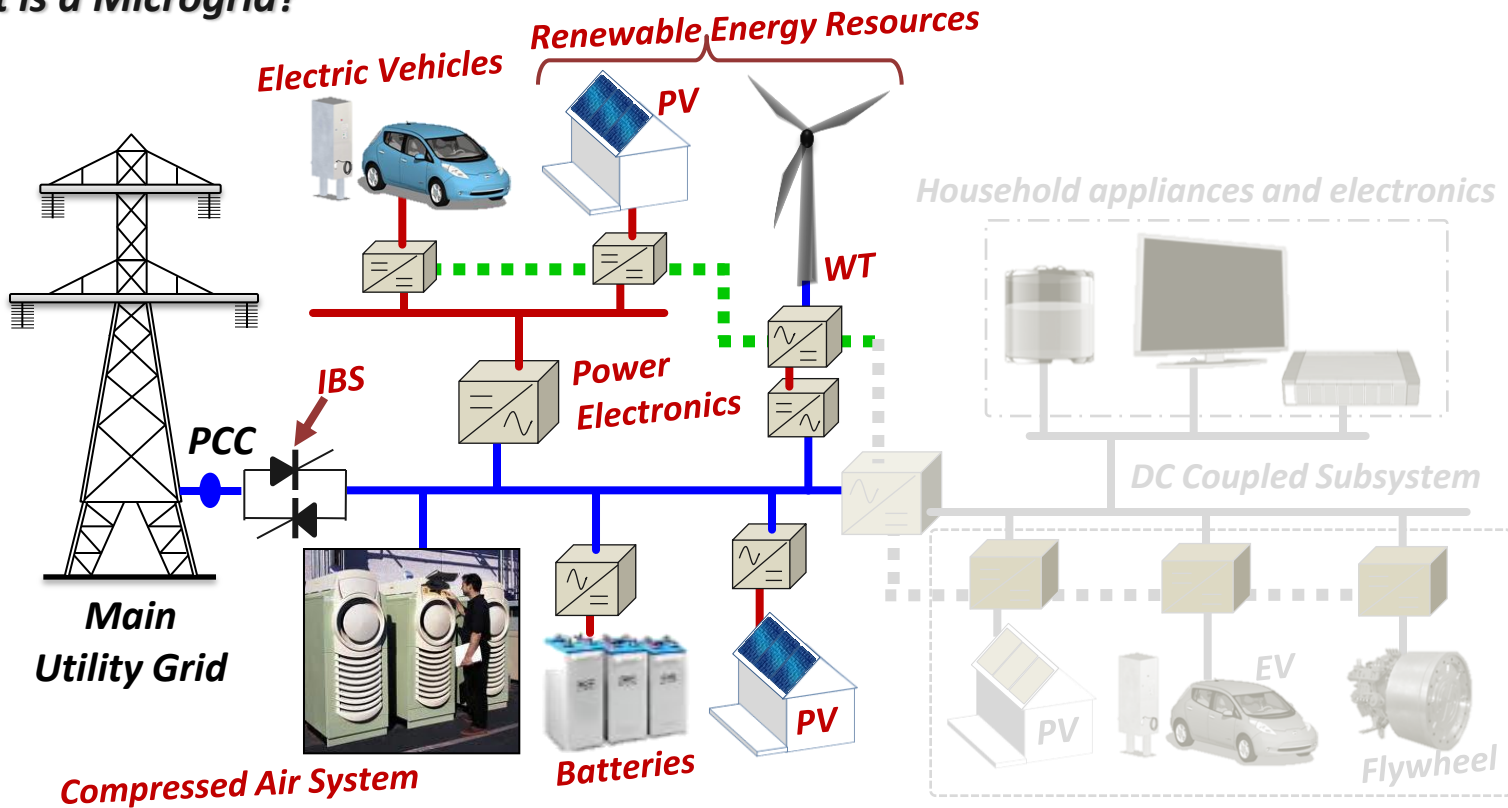

General aspects of a Microgrid: "Definition and Operation"

Modes of Operation: ISLANDED

General aspects of a MicroGrid: "Definition and Operation"

Modes of Operation: **GRID CONNECTED**

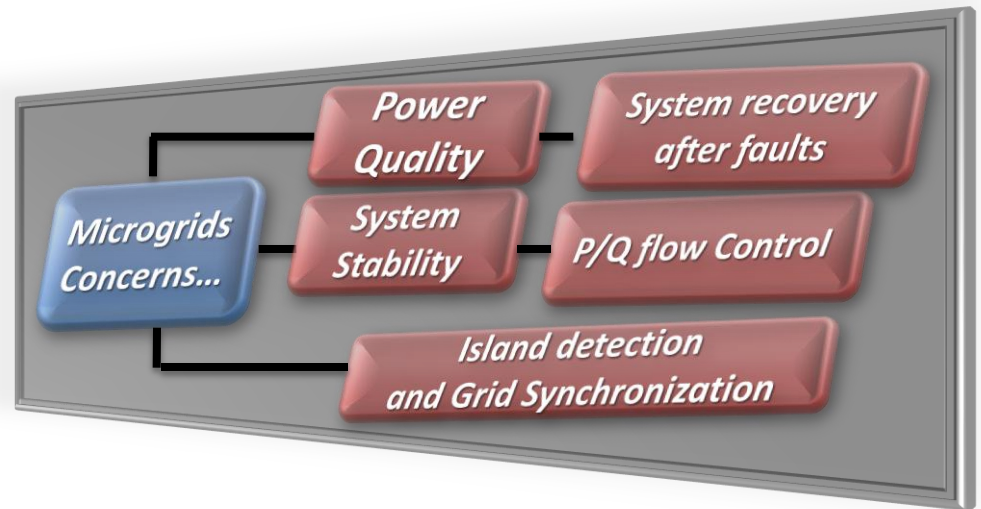

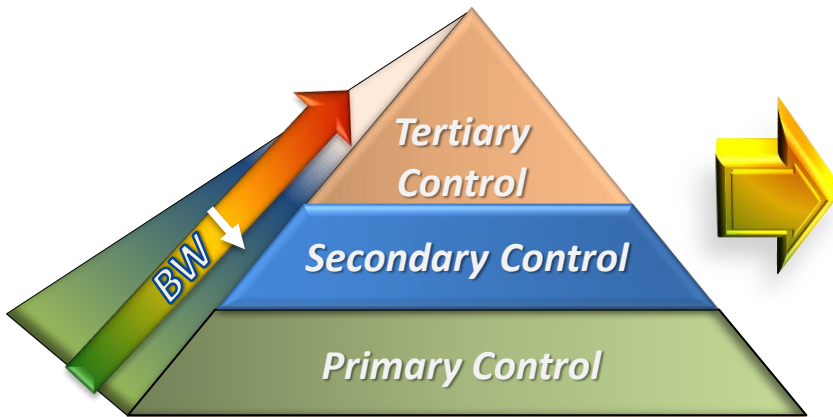

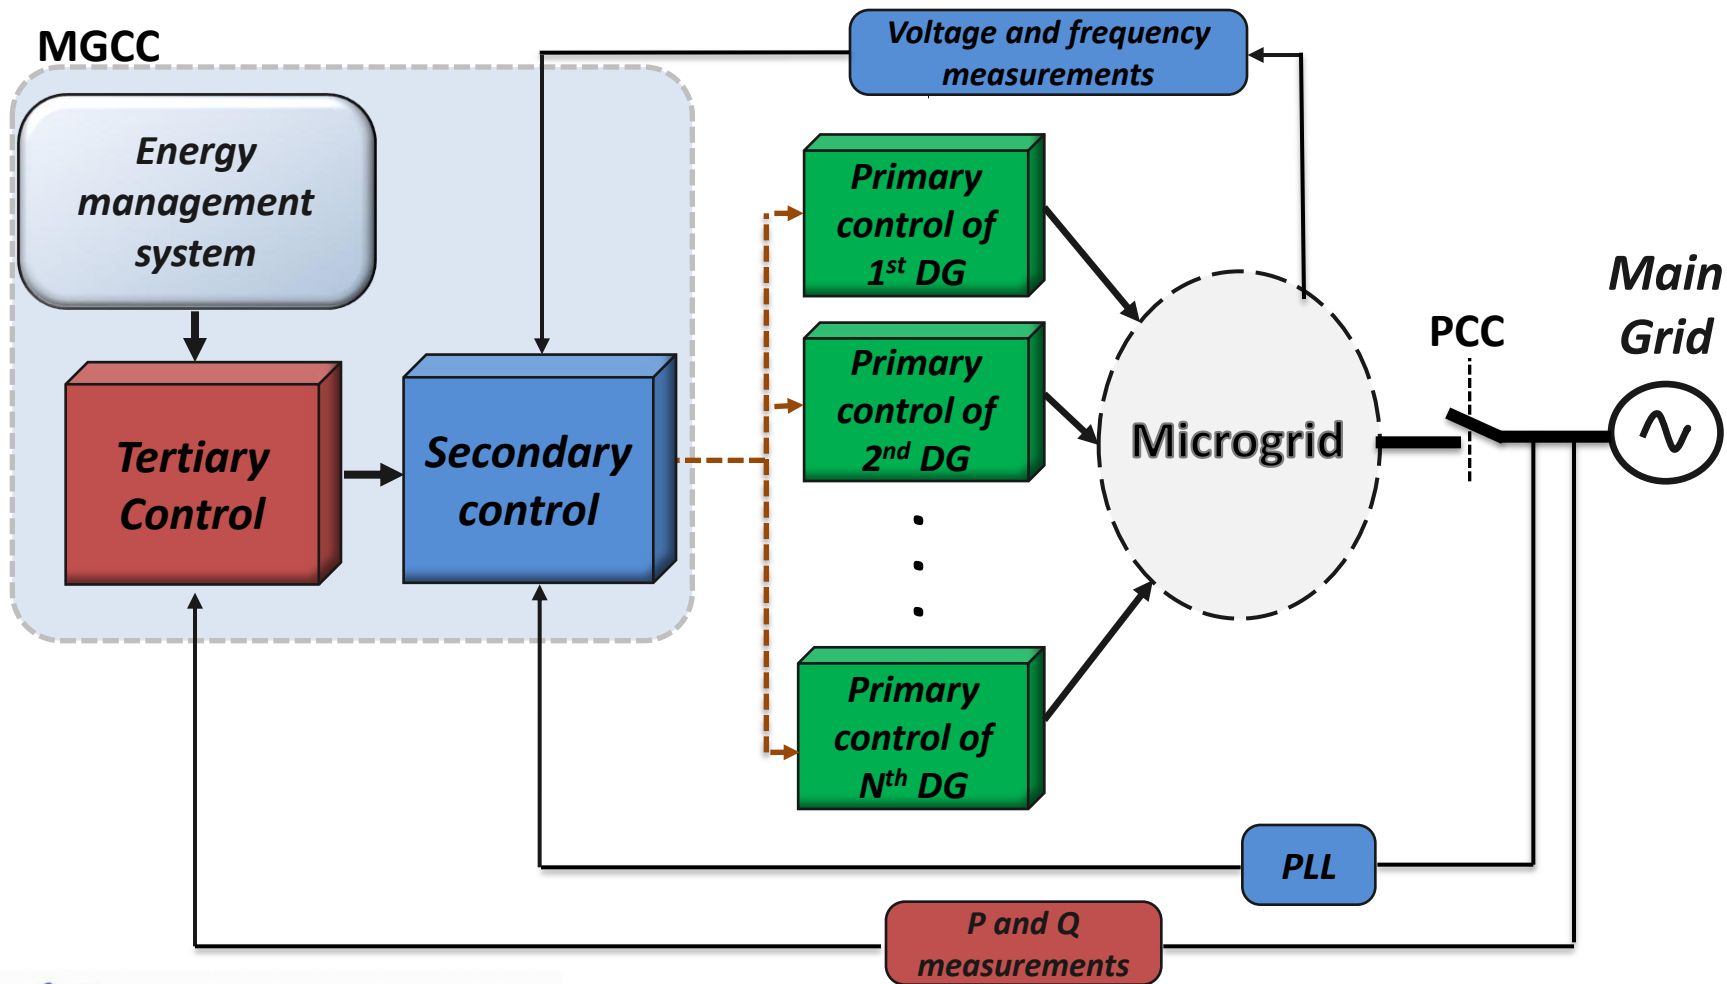

General aspects of a MicroGrid: “Definition and Operation”

Hierarchical Control for MicroGrids

- **Primary Control: Modeling + Inner loops + droop Control (P/Q Sharing).**
- **Secondary Control:**
 - **f/V Restoration (Island) :** Set-points assignation from MGCC to the DGs .
 - **Synchronization (Island to grid Connected mode)**
- **Tertiary Control: Power Import/export from/to the grid.**

Hierarchical control of Microgrids

Microgrids research challenges

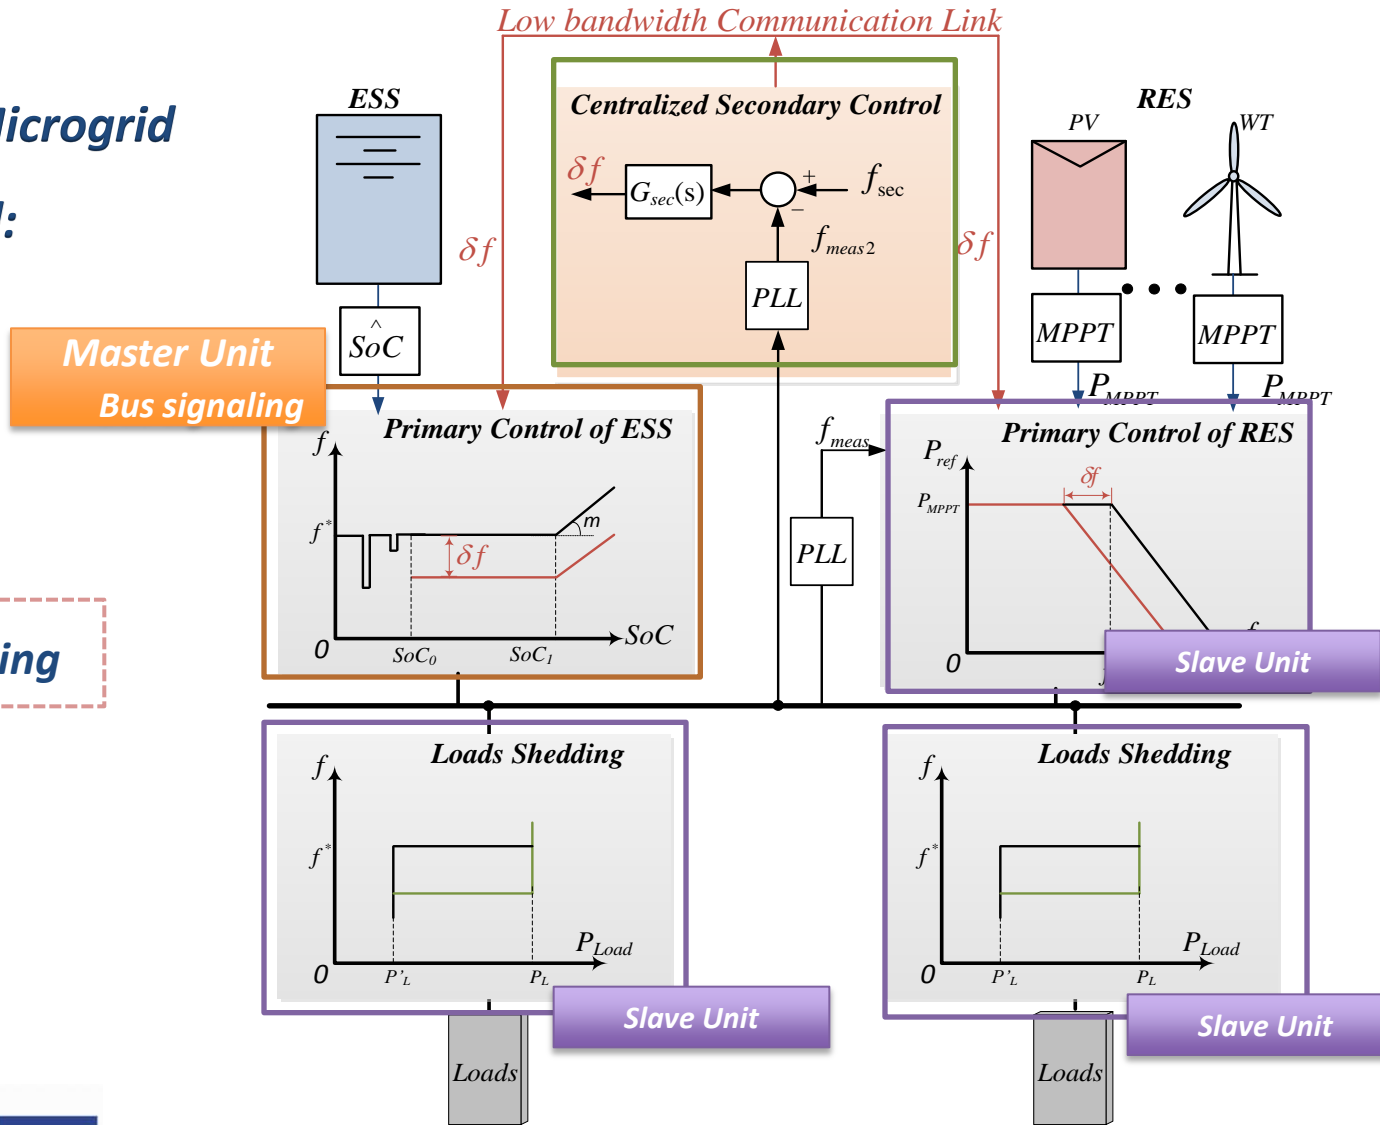

- Modelling, Control & Operation
- Distributed Control
- Integration of Energy Storage
- Standard-based ICT
- EMS Optimization
- Protection Schemes
- Power Quality

Basic control

Intelligent Microgrid Lab - iMGLab

The Intelligent Microgrid Laboratory (iMGLab) is a powerful platform designated for research and education on AC, DC and hybrid Microgrid technologies.

The laboratory is based on 6 workstations,

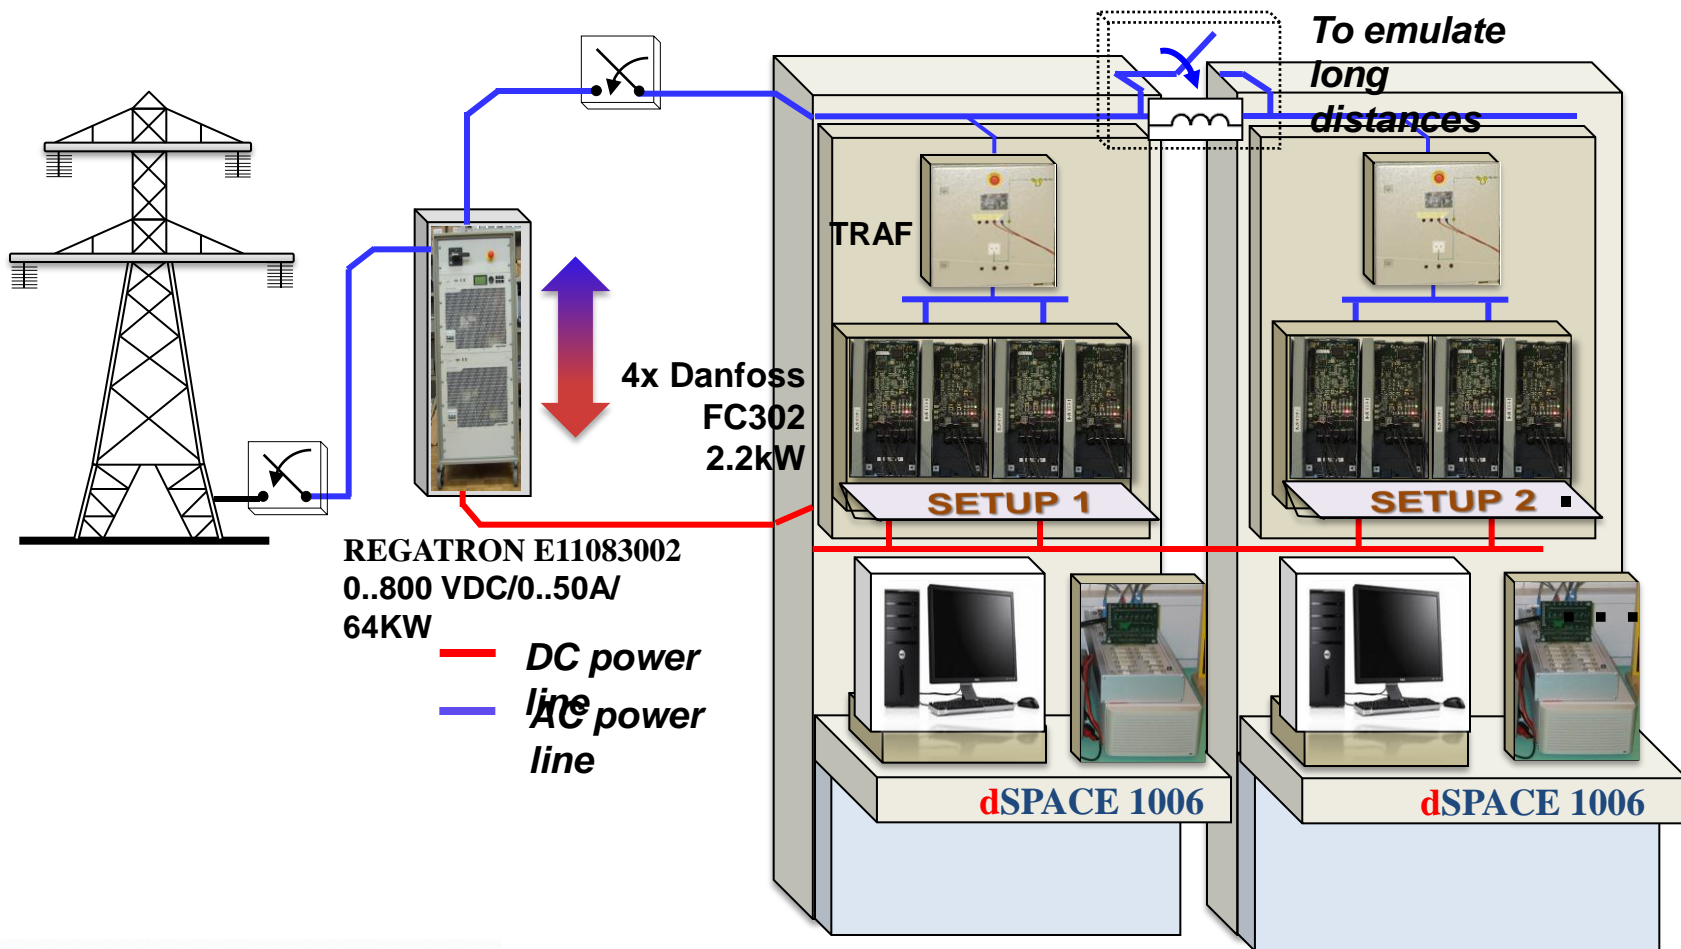

Every SETUP:

- 4 DC-AC power electronics converters,
- LCL-filters,
- Motorized change-over switches
- Smart-meters.

Every setup is able to emulate a multi-converter low-voltage Microgrid, local and energy management control programmed in dSPACE real-time control platforms.

Intelligent Microgrid Lab - iMGLab

Experimental tests - DSPACE 1006
