

We have not used a spreadsheet for the product backlog until v1.4 (sprint 4, 9/12/2017) because we were having it in Asana.

We had seen that was difficult for somebody outside the team to understand what was going on from the tool and we decided to keep also a spreadsheet.

Version from v1.0 to v1.4 (included) have been done starting from all the MOMs, sprint planning/review documents and all the data that we have in Asana, for a faster and easier reading for everybody outside the time. They were not done on the supposed day but only on the 9/12/2017. They were written afterwards.

Starting from that date (9/12/2017) we kept this spreadsheet updated and we published a newer version before every sprint planning. PDFs from version v1.5 have been published on the supposed date.
