

Minutes of Meeting

Project	Software Patterns	Date	17/10/2010
		Start-end time	18:00-19:30
Responsible	Ivica Pađen	Location /type	Videoconference (Croatia, Sweden)

Attended by	Location	Remarks
Antonio	Sweden	
Joanne	Sweden	
Shaibal	Sweden	
Ivica	Croatia	
Jasenko	Croatia	
Marko	Croatia	
Stipe	Croatia	

Purpose: Meeting was held to decide about open questions referring graphical user interface implementation, to clarify misunderstandings and to deliver tasks to be done until next meeting.

1. Eclipse IDE version discussion

Since Eclipse Helios IDE provides more possibilities for design of user interfaces, Antonio proposed it to be projects IDE. Current produced code would be transferred from Galileo to Helios and no compatibility issues would be expected. If Galileo IDE version is necessary, code implementation can be transferred back to Galileo after user interfaces have been created. Just in case, topic will be discussed with Paderborn team.

2. Graphical user interface discussion

There were some suggestions by the Croatian team members how current user interface of the main window(proposed in a design description document) should be changed. First proposal was to remove search controls from the main window since user will mainly use navigation through tree-like structure of catalog. Search should be available through main window toolbar menu and keys shortcut. Second proposal was concerned of the description of a selected pattern. Jasenko proposed that text description and figure description could be in the same scrollable area. On top of the description there could be links to parts of the description (like bookmarks in a pdf document). Optionally, user could be able to order description parts while editing certain pattern or adding a new one. Third proposal referred to colors of current design. Marko suggested that interface should be less vivid and more unified with classic Eclipse and POSE plug-ins. All proposals were accepted on both sides.

3. New ideas notification

If alternative better idea comes to mind of a certain team member during the progress of implementation he/she should notice other members. Idea will be presented on the wiki pages where team member should provide short description in “News” section and more detailed description should be provided in a document inside a specific folder on SVN server.

4. Tasks delegation until next meeting

Each meeting participant got task to fulfill until the next meeting. Tasks are to explore certain topic and find out how it should be utilized within the project. Topics are distributed as follows.

Sweedish team - GUI (graphical designer with MVC)

Jasenko - Persistence

Marko - MVC architecture

Stipe - Views

Ivica - Documentation tools & way to impose code conventions

5. Next meeting

Jasenko volunteered to create Doodle poll for arrangement of the next meeting which should be held in the first half of the incoming week.
