Attended by	Location	Remarks
Matej Vukosav	Zagreb, Croatia	
Thomas Benetti	Milano, Italy	
Gruia-Catalin Roman	Albuquerque, New Mexico	

### 1. Domain definition

#### Discussed

- project domain
- client wishes
- requirements
- time table

#### Conclusion

- client only wants to enable user easier search through our syllabuses repository
- client agreed that team have decision power to decide future project feature set if in scope of project description
  - project will include web page and backend system
  - user will be able to compare his faculty and courses on that faculty with other faculties in database
  - we will collect 4 syllabuses from FER, Polimi, MDH and New Mexico faculty
  - no scraping pdfs will be performed
  - data will be manually added to database at the beginning, later adding will be enabled to special user on web page, with api or universal form
  - bonus tasks will be social part allowing user to see what are social events around faculty
  - user engagement through voting and commenting system for each course
  - technologies are left to team to decide

#### Action

- Present customer idea and discussion to other team members
- Make project backlog
- Inform customer about team progress after something usable is done
- collect initial syllabuses
