
Taraxacum

The installation manual

Version 1.0

Doc. No.:

Taraxacum	Version: 1.0
Acceptance Test Plan	Date: 2011-1-13

1. Installation manual

1.1 Running application locally

Before you start working with ASP.NET MVC3 you need to install following software:

- Visual Studio 2010
- ASP.NET MVC3 tools (<http://www.microsoft.com/download/en/details.aspx?displaylang=en&id=1491>)

To run application, click on Build and Run in Visual Studio.

1.2 Deploying application on IIS server

In case of migration of Taraxacum application follows these steps

- Open Taraxacum project in Visual Studio 2010 or newer
- Click on main Taraxacum project with right click and select publish (Figure 1)

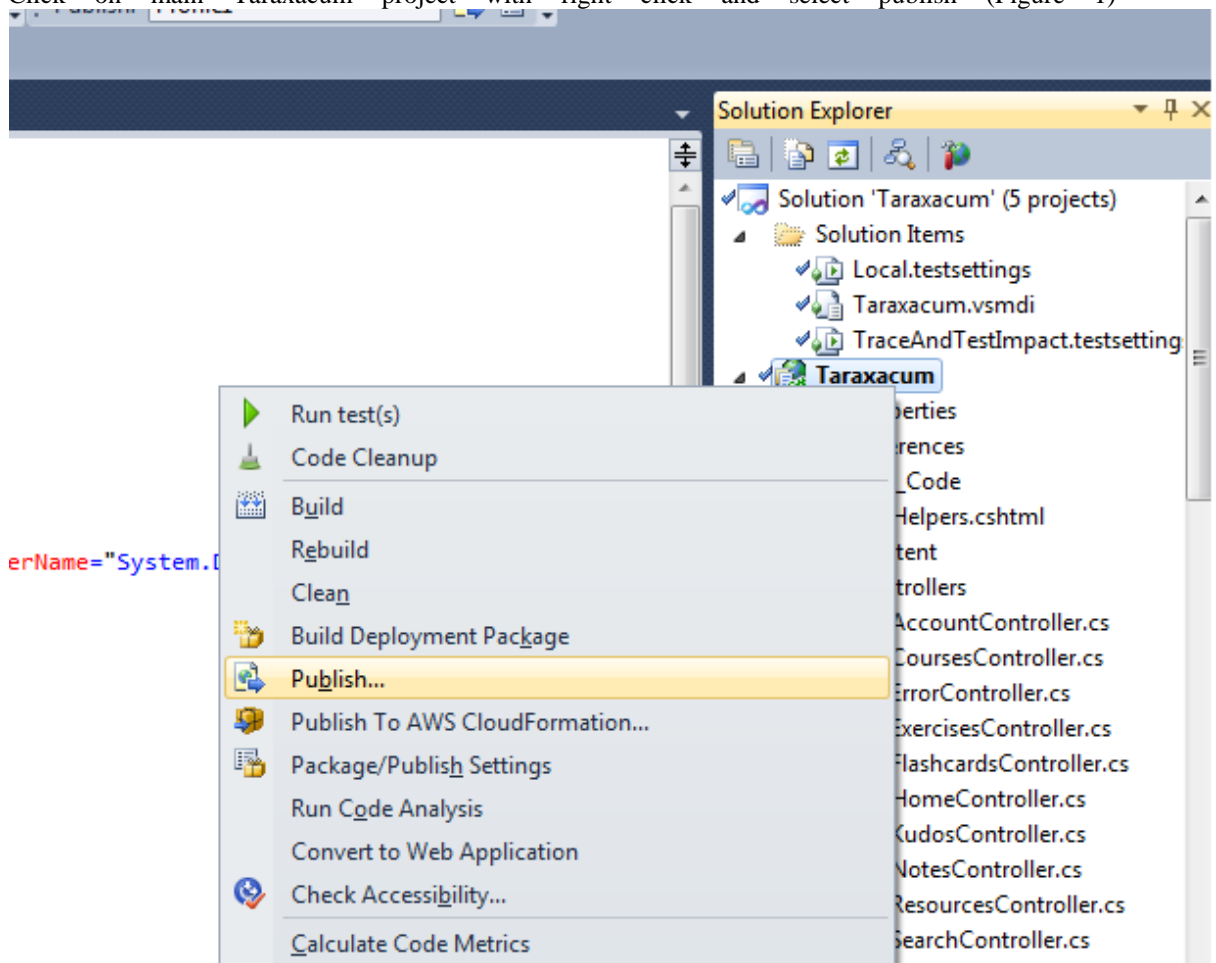

Figure 1

- The publish dialog will open
- Select "File system" as publish method and enter path to where file should be published (Figure 2)

Taraxacum	Version: 1.0
Acceptance Test Plan	Date: 2011-1-13

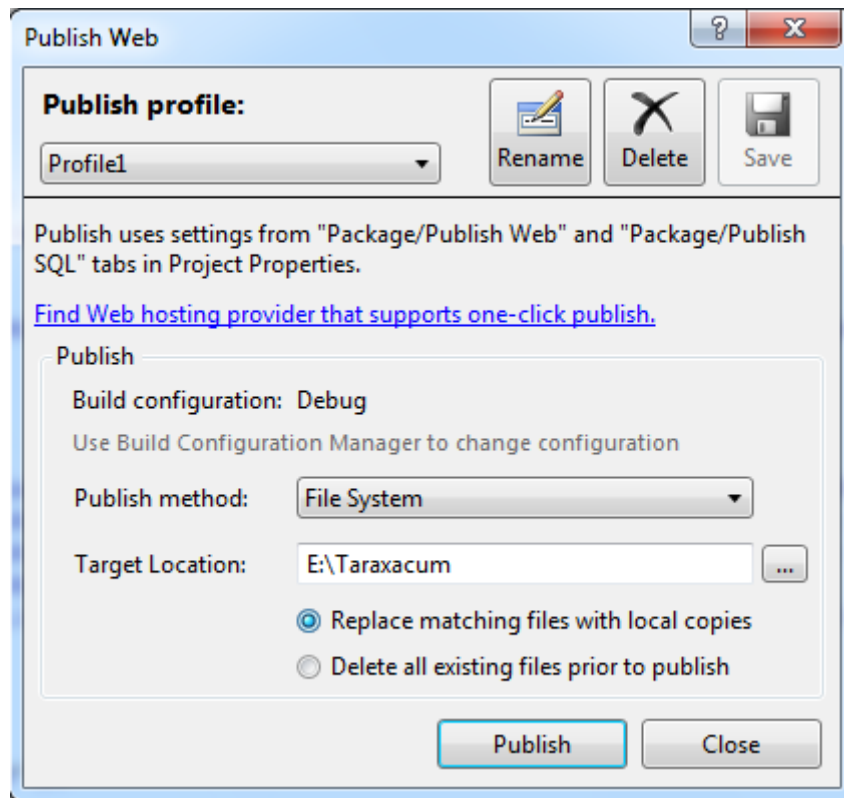

Figure 2

- e) Make sure that Internet Information Service(IIS) on server where you plan to deploy Taraxacum supports .NET framework 4.0 or newer and ASP.NET MVC revision 3
- f) Make appropriate changes to web configuration files if necessary (connection string and etc...)
- g) Copy published files to IIS application folder.

Please note that first run of application can take couple minutes while application generates necessary tables in database
