		Start-end time	16:00-17:30
Responsible	Josip Mališa	Location /type	Zagreb

Attended by	Location	Remarks
Ante Breščić	Zagreb	In person
Josip Mališa	Zagreb	In person
Zoran Besak	Zagreb	In person

Summary of meeting with stotinka.hr

stoperica.com is company which provides time measurement for participants of an sport event (usually ultra trails and running events). About the technology they use two types of tracking devices :

1. e-tag based on NFC low-cost technology which can be implemented in many ways and it is convenient to use for its size.
2. RFID technology implemented in bracelets together with antennas on checkpoints

When the participant ends the race the results are waiting for him on web. All the event participants can also see their progress through the race, standings at the checkpoint (and time also). They get the data in textual format same for every participant. They offered us data from one race. They just need acquire the GPS coordinates from all the checkpoints so we can show it on our maps (pins).
