

Minutes of Meeting

Project	RiderTrack	Date	30 th Nov 2017
		Start-end time	17:30-18:30
Responsible	Alessandro Caprarelli	Location/type	Video Conference Milan – Zagreb

Attended by	Location	Remarks
Alessandro Caprarelli	Milano	Remote
Giulia Leonardi	Milano	Remote
Marzia Degiorgi	Milano	Remote
Ante Breščić	Zagreb	Remote

1. Next steps for Beta prototype

User interfaces discussion. How to add the route in management and event details.

CONCLUSION: We will create a page for the route management for the organizers. In the management page there will be only the form with the information. A button in that page will point to the route management.

In the event detail page there will not be the real time progress but only information. The real time progress will be in a different page that will be accessible from the event boxes (that are in home page, events list..) and from the event detail page. The real time progress page will not have header and footer, and will have only the map at full size to make this page fully accessible.

The pages will be accessible from:

- Event details: /events/:eventId
- Event management: /events/:eventId/manage
- Event route management: /events/:eventId/manage/route
- Event participants list: /events/:eventId/participantsList
- Event real time tracking: /events/:eventId/tracking
- Event creation: /events/create

ACTION: Marzia will work on the route management for organizer

ACTION: Giulia will start looking at the mobile application needed for collecting data

ACTION: Ante will start working on the real time progress page
