Advanced search protocol and API

This was the only topic discussed on the meeting today. We need to find a flexible solution that will work both on the web application and on android client. The problem is mainly of inability to decide which data needs to be visualized. There were some interesting proposals from some of the team members mostly from Predrag, Dino and Igor. Bal will provide his ideas tomorrow in separate document.

Conclusions:

- The advanced search will be divided. We will implement separate advanced search for player, team and coach.
- Player advanced search has priority. We must finish that before we continue working on the others.
- General form of the response object agreed. Needs to be implemented before further actions.

Actions:

- Predrag will implement his updated version of the initial advanced search object response.
- Next meeting scheduled for tomorrow 2012-12-09 at 10:00 am.
