

# Minutes of Meeting

<b>Project</b>	GiftCase	<b>Date</b>	31.10.2014
		<b>Start-end time</b>	18:00-19:30
<b>Responsible</b>	Damir Tomić	<b>Location/type</b>	Zagreb

Attended By	Location	Remarks
Vlatko Klabučar	Zagreb	
Damir Tomić	Zagreb	
Ana Stepić	Västerås	

The project owner presented us the answers to the questions which were brought up on the previous meeting. We have been discussing the tools which can help us in the requirements definition and the development of diagrams for easier understanding of the concepts. We have discussed the work which has to be done until the next presentation. A summary of the important things that have been discussed is provided below.

## CONCLUSIONS:

- For the next presentation we have to:
  - clear the requirements: write them in appropriate format and discuss them with the client;
  - think about the architecture of the application and probably draw some UML diagrams for clear presentation.
- We are unsure about the benefits of using a tool for requirements text and diagrams generation.
- The scope of the project is cleared with the client:
  - Front-end (a mobile app)
  - Back-end (service that communicates to the Front-end and fetches data from 3rd party services)
  - Engine (the Back-end encapsulates it, giving it data; the Engine then makes decisions about appropriate presents using some mathematical simple model)
- Answers to questions, which the product owner has discussed with the client:
  - The application should get the information about the location of the client from the Telco, which will be mocked-up functionality.
  - The mock-up of the payment should include:
    - the client should be able to enter identification information
    - the real authorization should be mocked-up

## ACTION:

- Next meeting: 02.11.2014 on which we will start writing the requirements and discuss outstanding issues related to the scope of the project.
