Programsko inženjerstvo
može biti i nešto vrlo beznačajno

Klasično programiranje (I)

- ☞ UNIX, syst. prog., ljuške, filtari,.....
- ☞ C, cc, ln, as, a.out, dbx, od,
- ☞ make, yacc, lex, time, prof, gprof,...
- ☞ sccs, nroff, bibl, vi, sort,.....
- ☞ HTML, WWW, cgi,.....
- ☞ Znanje koje se podrazumijeva !
- ☞ lit.:
 - M.Ž., UNIX i kako ga koristiti,
 - M.Ž., UNIX i kako ga iskoristiti

1/26/2003

(c) M.Žagar, RASIP, FER

Klasično programiranje (II)

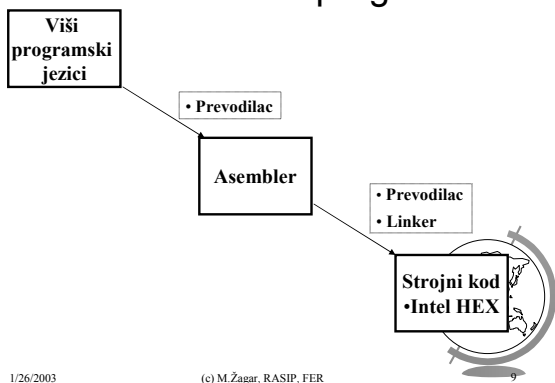

- ☞ WIN 3.11, Windows95, Windows98, NT, Windows 2000
- ☞ VisualBasic, C++, Java
- ☞ X11, Motif,
- ☞ Baze (SQL), G, ...

1/26/2003

(c) M.Žagar, RASIP, FER

Razine programa

1/26/2003

(c) M.Žagar, RASIP, FER

Viši programski jezici

- Formalni opisni jezik kojim programer opisuje što mikroprocesor treba napraviti.
- Notacija kojom se programer služi lakša je za snalaženje nego u assembleru.
- Svaka naredba u višem programskom jeziku odgovara nizu naredaba u strojnom jeziku.

U nastavku, primjeri programskog jezika C, C++

1/26/2003

(c) M. Žagar, RASIP, FER

10

Asembler

- Programski jezik koji omogućava programeru pisanje programa koristeći mnemonike,
- Mnemonici - razina strojnog koda,
- Assembler je simbolički programski jezik niske razine (eng. LOW-LEVEL LANGUAGE),
- Omogućava korištenje mnemonika, makro naredaba, labela, ključnih riječi (npr.: ORG, DW, DB ...),
- Omogućava jednostavan pristup svim registrima mikroročunala.

U nastavku primjeri za Z80, i8051 i PIC16c54

1/26/2003

(c) M. Žagar, RASIP, FER

11

Strojni kod

- Osnovni programski jezik koje mikroprocesor može izvršavati bez prevođenja.
- Sastoji se od niza brojeva koji predstavljaju naredbe mikroprocesora
- Za zapis strojnog koda često se koristi INTEL HEX FORMAT (ASCII)

1/26/2003

(c) M. Žagar, RASIP, FER

12

FORMAT INTEL HEX

format zapisa:

start znak →: **NN aaaa 00 xxxxxxxx...xxxx ss**

↙ ↖ ↗ ↘
 broj znakova kontrolni znak kontrolni zbroj
 adresa niza podaci

- *start znak* - početak svakog retka
- *broj znakova* - broj znakova koje se upisuju na adresu *aaaa*
- *adresa niza* - logička adresa niza u memoriji počevši od *aaaa*
- *kontrolni zbroj* - broj koji dodan ukupnom 8-bitnom zbroju niza daje zbroj nula

1/26/2003 (c) M. Žagar, RASIP, FER 13

FORMAT INTEL HEX

```

:20 01 00 00 F3 ...      00
:20 01 20 00 30 ...      01
:20 01 40 00 21 ...      00
:20 01 60 00 D6 ...      +01
:01 01 80 00 87 F7       ----
:00 01 00 01 FE          02
:BBAAAACCCDDDDD...DDDDSS  FD
                                FE
    
```

21

PROGRAMIRANJE PIC-16c54

•Postupak programiranja:

- Podižemo napon na pinu /MCLR od 0V do 13V i držimo pin T0CKI na 5V.
- Programski brojač se postavlja u "0xFFFF", zato što je na početku /MCLR na 5V što predstavlja reset procesora.
- Pulsiranjem OSC1 pina povećavamo programsko brojilo
- Spuštanjem pina T0CKI na 0V pohranjujemo podatak na pinovima D0 - D11 u EPROM
- Nakon što programsko brojilo dođe do zadnje lokacije "0xFFFF", njegovo daljnje povećavanje znači adresiranje funkcijskog dijela EPROMA

PIC16C7X (I)

PIC16C7X - 8-Bit CMOS Microcontrollers with A/D Converter

PIC16C7X Microcontroller Core Features:

- High-performance RISC CPU
- Only 35 single word instructions to learn
- All single cycle instructions except for program branches which are two cycle
- Operating speed: DC - 20 MHz clock input
- DC - 200 ns instruction cycle
- Up to 8K x 14 words of Program Memory, up to 368 x 8 bytes of Data Memory (RAM)
- Interrupt capability
- Eight level deep hardware stack
- Direct, indirect, and relative addressing modes
- Power-on Reset (POR)
- Power-up Timer (PWRT) and Oscillator Start-up Timer (OST)
- Watchdog Timer (WDT) with its own on-chip RC oscillator for reliable operation

1/26/2003

(c) M. Żagar, RASIP, FER

28

PIC16C7X (II)

- Programmable code-protection
- Power saving SLEEP mode
- Selectable oscillator options
- Low-power, high-speed CMOS EPROM technology
- Fully static design
- PIC16C72, PIC16C73, PIC16C73A, PIC16C74, PIC16C74A, PIC16C76, PIC16C77
- Wide operating voltage range: 2.5V to 6.0V
- High Sink/Source Current 25/25 mA
- Commercial, Industrial and Extended temperature ranges
- Low-power consumption:
 - < 2 mA @ 5V, 4 MHz
 - 15 mA typical @ 3V, 32 kHz
 - < 1 mA typical standby current

1/26/2003

(c) M. Żagar, RASIP, FER

29

PIC16C7X (III)

PIC16C7X Peripheral Features:

- Timer0: 8-bit timer/counter with 8-bit prescaler
- Timer1: 16-bit timer/counter with prescaler, can be incremented during sleep via external crystal/clock
- Timer2: 8-bit timer/counter with 8-bit period register, prescaler and postscaler
- Capture, Compare, PWM module(s)
 - Capture is 16-bit, max. resolution is 12.5 ns,
 - Compare is 16-bit, max. resolution is 200 ns,
 - PWM max. resolution is 10-bit
- 8-bit multichannel analog-to-digital converter
- Synchronous Serial Port (SSP)
- Universal Synchronous Asynchronous Receiver Transmitter (USART)
- Parallel Slave Port (PSP) 8-bits wide, with ext. RD, WR and CS controls
- Brown-out detection circuitry for Brown-out Reset (BOR)
