

  MÄLARDALENS HÖGSKOLA	 POLITECNICO MILANO	Minutes of Meeting
---	--	---------------------------

Project	Social media in the Automation Industry	Date	19/12/2013
		Start-end time	20:00-21:20
Responsible	Dimitris Kostopoulos	Location/type	Zagreb/Västerås

Attended by	Location	Remarks
Ditmar Parmeza	Skype	
Marta Milakovic	Skype	
Robert Gustavsson	Skype	
Dimitrios Kostopoulos	Skype	
Akhlaq Malik	Skype	

1. Decide secretary and agenda keeper

Dimitris Kostopoulos is going to be the secretary and Ditmar Parmeza is the agenda keeper.

2. What has to be done in:

a. Simulator

The simulator does not need any changes, since it supports all the needed functionality.

b. Database

The database does not need any changes, since it supports all the needed functionality, but maybe some minor changes will be needed.

c. PortableBLL and DAL

Functionality for adding images when a feed is posted is missing. There are some problems in its implementation. If the problems insist more human resources will be added. Comment made by Pierfrancesco will be included.

d. normal BLL and DAL

Some bugs were noticed in the normal BLL, but they will be reported or fixed. Other than that the functionality fulfills the requirements. Comment made by Pierfrancesco will be included.

e. Mobile PL

Also here the functionality is more than enough. Some exceptions should be caught and some styling will be added. Lastly, some redirection corrections will be done.

Some details were discussed, about the proposed by the customer idea to present the mobile and the whole project's goal in a different way. Aneta suggested to prepare a commercial-like video in which the functionality and the usage is seen.

f. Web PL

The functionality that currently the web has is enough. A comment was made by the group members for the content of the right column of the main page, which was initially decided that will contain subscribed sensor values and not sensor feed (which can be retrieved from filtering). Removing unnecessary icons from the bars should be done. It was noticed that the search by username of the bar had some problems (did not showed any results).

A further discussion will be made about some functionalities that are present in BLL and database (if it is on the plan to be implemented). A list of that functionality is:

1. Save a filter (creates a custom filter by any combination of the available filters)
2. Use a saved filter

3. Follow and unfollow sensor
4. Activity on the profile page
5. Current value of the sensor in a graphical way

g. Service

A solution is needed for passing the picture into the database (as a string). A change will be done so the service references normal DAL. This way reusability of part of code will be achieved.

h. Testing

Trouble in testing the method get all comments from a feed (normal BLL), which is the only feature to be implemented.

User testing also remains to be done for both applications and it will be completed before the final presentation. It was requested from the customer so its results will give greater value to our product.

3. Problems to solve during xmas

- a. Still cannot send pictures through the service

4. Activities in final phase

Testing and further improvements will be done

Commenting the code

Finalizing the functionality

Documentation: Acceptance Testing, will be send to Federico for comments (deadline 2013-12-31 23:59)

Test Report (deadline 2014-01-08 23:59)

Requirements document needs minor changes (deadline 2014-01-13 23:59)

Design needs major changes (deadline 2014-01-13 23:59)

Final project report (deadline 2014-01-13 23:59)

Software documentation (deadline 2014-01-13 23:59)

5. Next meeting?

30th of December is one proposed date to have the next meeting of informing each other about the state. A poll will be made in order to choose an hour during the day for scheduling the meeting.

6. Next weeks activities

Please submit your weekly report by Sunday (22/12) and don't forget the HAPPINESS POLL on Monday (23/12)

The allocation in activities during the week of christmas is open in the manner that the team members can pick up the activities that they want to contribute. For avoiding some misunderstandings or allocation in the same activities by any chance (like fixing the same document), we should include a comment in the first page of each document that it is currently under change. That way we can contribute in different things.

Important: Whenever a team member makes a change in a document, he should be comment the changes that he did in the first page.

7. Other Questions / Thoughts

Pierfrancesco was not present in the meeting because he was traveling back to Italy. Mario and Tomislav had to work over-time and therefore could not attend.

The contribution and the workload was really impressive during the last two weeks and the team members should continue in this way till the end.
