Comments / Experiences / Problems

Achievement

- Requirement document improved came to V3.1
- The decision tree algorithm part was analyzing, and initial questions and results had sent to customer to answer and check,
- The data out(data from Yoshi prototype) was made into Jason file and match to real meaning
- Decide to use python for development language.

Problem

- Some variables and corresponding thresholds in algorithm(Yoshi.pdf((Let Me Measure My Self!)) are still confusing (Waiting for customer's confirmation and answers)
- Lack of some data needed in algorithm(Waiting for customer's confirmation and answers)
- Building graphical representation of the decision tree rather than highlight
